

@LeetCode

Given an array `nums`, write a function to move all `0`'s to the end of it while maintaining the relative order of the non-zero elements.

Example:

Input: `[0,1,0,3,12]`

Output: `[1,3,12,0,0]`

Note:

1. You must do this **in-place** without making a copy of the array.
2. Minimize the total number of operations.
