@LeetCode

Given a string S, we can transform every letter individually to be lowercase or uppercase to create another string. Return a list of all possible strings we could create.

```
Examples:

Input: S = "a1b2"

Output: ["a1b2", "a1B2", "A1b2", "A1B2"]

Input: S = "3z4"

Output: ["3z4", "3Z4"]

Input: S = "12345"

Output: ["12345"]
```

Note:

- S will be a string with length between 1 and 12.
- S will consist only of letters or digits.
